THE VANDERBILT DELPHINIUMS

(Types List --- 1928)

THE VANDERBILT HYBRID DELPHINIUMS

(Illustrated "Message" on request)

The Vanderbilt Delphiniums are definitely a pure bred strain, all derived from crosses of the native D. scopolorum for form and resistance, x Burbank strain for finest color variation; and a section x D. cardinalis for vividly enriching clearest blues and aiming for an ultimate red flowering plant. The experiments on variation began in 1912. The first 100 numbers were reserved for named plants of 10 qualities each. Successive century numbers up to 10,000 have been given markedly distinctive types as bases from which merit reselections bear the relative serial numbers. Thus Type 100 with "Dr. R. I. Moore" as base gives a packet from 10-100 most closely resembled plants thereto in color and habit, whilst each year sees substitutions in that series of even better average merit. The same type number in successive years, therefore gives better and better averages in parent plant seeds to type. While the bulk of our seeds go to several large seed firms and innumerable nursery and cut-flower growers in U. S., Canada, and abroad, we have from the beginning enabled garden folks to obtain specialities to parent color, etc., with slightly added price for special handling. But in spite of regularly doubling our output, since we reserve only 20% of best things for specialties order, the supply is soon exhausted. ALL other stocks go into mixtures to protect the standard for larger purchasers. Pre-season reservation, (money when notified), will in large part enable former patrons (who receive this list first) to obtain limited stocks of our specialities. Our stock of new seeds are in fair variety by July 1st and progressively complete about August 15th, according to season. Many special growers indicate a color preference, numbers of plants desired, state an approximate sum, and allow us to pro rate the types as available,—where more than packet lots are required. We send seeds to any part of the world and guarantee viability test on arrival. Let us send a foreign friend a 50c selections packet for you.

Heights are average here. We seldom irrigate until buds form. Otherwise many will grow to eight feet with shorter spikes. All are double or semi-double, mainly light bees, and ruffled and iridiscent.
Plants 1-99, named. 34 plants, 10 rated qualities each.

Type—

100 Dr. R. I. Moore base. Soft pastel blue, one pink inner petal; 4 feet

200 Pauline Vanderbilt base. Aster petalage, double rosettes, pink tinted light blue; 5 feet

300 Larger flowered, taller selections, doubled of type 100; longer spikes; pink-blue; 5 feet

400 Poessel’s Pink base. Nearest clear pinks; 4-5 feet

500 Large flowered, beginnings of later type 5500. Variable pink-blue 4 feet

600 Mrs. Minnie Quest base. General collection pure selfs in mauve, lilac, lavender, mouse, and light to deepest blue-purples. Some singles; 4-6 feet

700 Ethyl Moore base. Rosette, light blue, inner mauve, rich brown bee; 5 feet

900 Deepest shades, D. cardinales doubles, some selfs, or splashed or shaded pure crimson; 4-5 feet

1000 Cathedral Spires base. Single sky-ivory, faintly tinted rose; very long, erect symmetrical spikes; 5-6 feet

1100 Selected finest singles, mixed; 5-6 feet

1400 Indicated new charges in form. Cannot foretell results in seedlings; 5 feet

1500 Lord Kitchener base. Exquisite clear sky or turquoise, finely doubled, light bee. We believe the first doubles in this color; 5 feet

1600 Singles of D. cardinals. A distinct variation in enormous spikes in medium, light or tinted blues. None deep. Extreme vigor; 6 feet

1700 Exquisite preference in deep blue with inner plum purple. A D. cardinales specialty. Fine spikes; 4 feet

1800 Finest ruffled selections; light blue; tinted and iridescent; 5 feet

2000 Light blue, dark bees; singles; 5 feet

2100 Debutante base. Rounded flower, light blue ivory tints; 5 feet

2200 Singles in clear sky blue or belladonna shade; 5-6 feet

2500 Mrs. Martha Phillips base. From type 1700 but fine fuchsia purple inner, deep blue outer; 4 feet

3500 Nellie C. Schlosser base. Tall, long spikes with completed inner row of type 100; 6 feet

3600 Inimitable “tinted glass” effects in light blues, rose shaded; 6 feet
3800 Thickest petals, selections for lasting. Light. Limited stock; 5 feet
3900 From a dwarfed No. 498 plant, now tall, long spikes, thick petals, semi-double, pink-blue. Fragrance first started in this type; 6 feet
4100 The "Divider" base. Nearest to perfection in original aims. Tall, slender, wiry stalk; long, loose spikes, doubled; light and medium tinted blues; 6 feet
4200 Retained specials in compact, candle-like spikes of rare beauty, tinted light blue; 6 feet
4300 Lillian Murray base. Leader of all in sheer beauty. Poor seeder. Long spike, semi-bee; light blue shades to rose center; 6 feet
4900 Glorified type 100; tall, large flowered and flamed instead of shaded pink on light blue; 6 feet
5300 John W. Schlosser base. A marked D. cardinalis sport. Large flowered, vividly bright deep blue and crimson; 5 feet
5500 Minnie T. Fallon base. A new progeny succession strain of flowers up to 3½ inches; immense spikes and vigor. Built up for special structure characters of plant in four generations; 7 feet
5600 Deep blue, tinted purple, white bee, large; 5 feet
6000 Lillian Quandt base. Exquisite cutting singles, light blue, pink shaded wing petals; 5 feet
6800 Clearest deep blue singles. Vari bees; 5-6 feet
7300 Beginnings of Burbank Memories type (8100). Loose, open light blue with clear pink inners, semi bee'd; 5 feet
7700 Mrs. John Sterling base. Fine fluffy rosette, light blue and mauve; 6 feet
7800 Billy Vanderbilt base. Tall medium blue and mauve. Fine; 6 feet
8100 Samarkand base. Rarely beautiful, semi-double, clear pink shaded blue. Exquisite; 4 feet
8300 Mrs. Francis King base. Clear self; deep blue doubles; light eye. Sun resistant; 5 feet
8500 Selections of finely imbricated types as pictured. Ruffled, light blue-pink, iridescent, light bees; 5 feet
9400 Mrs. N. F. Vanderbilt base; large flowered aster petalage; perfect rosette; 5 feet
9500 New selections listed for classifying; 6 feet
10,000 Maximum average toward perfect plants in 10 qualities, made up from all types; 5-6 feet
SUPPLIES LIST

THE VANDERBILT HYBRID DELPHINIUMS
1928-9

(1) Vanderbilt Hybrids, 8000 tested selections (not merely a field seeds collection) from about 160,000 grown here in a pure bred strain. For nursery, cut bloom and large plantings this gives universal satisfaction and several largest seed firms distribute it. Light or dark shades increased at request. Ounce, $3.50; trade packet, 500 seeds, 50c. Special shades to order.

(2) Vanderbilt Specialist Packet, at least 400 seeds, $1.00. From 1000 personal preferences of the collection, leaders in all type series.

(3) Vanderbilt Special Mixtures to parent coloring in light, medium, deep, pink-blue, or in mixed doubles or singles at least 400 seeds, $2.00. (Selected doubles only, $3.00.)

(4) Vanderbilt Fanciers' Types, at least 100 seeds, per single packet, 50c.

(5) Vanderbilt Fanciers' Groups by packet at least 100 seeds, five selections, $1.50; ten selections, $2.75; fifteen, $4.00.

(6) Vanderbilt Exhibitions Group, 100 plants, chosen from named and form best spikes, vigor, resistance, beauty and succession, at least 400 seeds, $3.50; 1000 seeds, $7.00.

(7) Vanderbilt Named Sorts. A Vanderbilt named plant means a perfected ten quality plant. We allow very few to be named. 34 plants, mixed, at least 200 seeds, $1.50. In selected main color, 100 seeds, 75c. Limited supply.

(8) Vanderbilt Amateurs' Packet. Our personal selection to main color desired, at least 200 seeds, 50c. Prices include United States and Canada delivery, also foreign totaling quarter ounce lots. Ten cents extra for Air Mail saves several days carriage. We advise 1st, 2nd, and 3rd choice be sent us.
